

Slicing

Use slicing to find the first four elements of the following string:

In [1]:

```
Letters="ABCDEFGHIJK"  
Letters[:4]
```

Out[1]:

```
'ABCD'
```

Strides are Good

Use a stride value of two on the following string :

In [3]:

```
Good="GsoAo+d"  
Good[::2]
```

Out[3]:

```
'Good'
```

uppercase to UPPERCASE

Convert the following string to uppercase using the method `upper()`

In [4]:

```
a = "uppercase"  
a.upper()
```

```
File "<ipython-input-4-d10adfaa10fc>", line 1  
    .upper("uppercase")  
    ^
```

```
SyntaxError: invalid syntax
```
