

Get to Know a numpy Array

You will use the dataframe `df` for the following:

In [1]:

```
import pandas as pd

df=pd.DataFrame({'a':[11,21,31], 'b':[21,22,23]})
```

1) plot the first three rows:

In [2]:

```
df.head(3)
```

Out[2]:

	a	b
0	11	21
1	21	22
2	31	23

2) obtain column 'a'

In [3]:

```
df['a']
```

Out[3]:

```
0    11
1    21
2    31
Name: a, dtype: int64
```
